

## Kingfisher News

Just when we thought the cherry blossom front had reached the northernmost tip of Japan, we received information about summer sun observation in various parts of Japan. It seems that the Japanese archipelago is already heading towards summer.

Continuing from last year, we will continue to bring you Kingfisher News this year as well. In this and the next installment, we will talk about updating the data on the panel created when establishing a corporation.

### Topic

#### Panel data has been updated (1)

This time, it's about the current state of the world.

How did global carbon dioxide emissions change during the three years from 2016 to 2019, the data before the update?

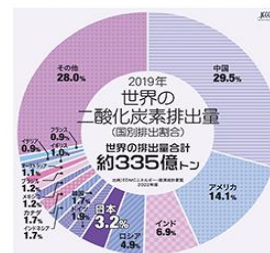

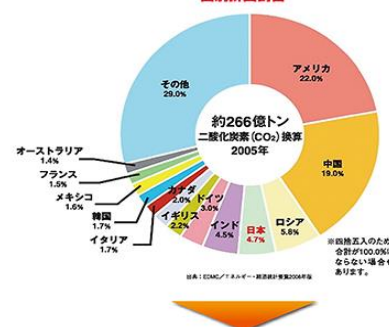

First, total global emissions increased from approximately 32.3 billion tons to approximately 33.5 billion tons, an increase of approximately 3.7%. We hold international conferences every year to discuss the issue, but it seems to have no effect. Next, regarding the emission ratio of each country, the United States and Japan have reduced their emissions from 15.0% and 3.5% to 14.1% and 3.2%, respectively, while China, India, and Russia have increased their emissions from 28.0%, 6.4%, and 4.5% to 29.5%, 6.9%, and 4.9%, respectively.

\*The United Nations has held the Conference of the United Nations Framework Convention on Climate Change every year since 1995, and last year was the 27th meeting. However, we have not been able to stop the increase in global carbon dioxide emissions. We think **the United Nations needs to take the initiative and take concrete actions**, not just hold meetings.

### 世界の現状

#### 世界の二酸化炭素(CO<sub>2</sub>)排出量

◆世界の二酸化炭素排出量(2005年)  
一國別排出割合

2019年の世界の二酸化炭素排出量は、2005年に比べて約26%の増加となっています。世界が協調して削減に取り組まなければならない課題であるはずなのに、中国やインドなどは大幅な増加となっています。
